# Luisa Kortner

Innsbruck, Austria | luisakortner@gmail.com | github.com/luisakortner | Portfolio

## Education

**University of Innsbruck** — Innsbruck, Austria
*B.Sc. in Architecture* — *Oct. 2024 – Jul. 2027*

## Experience

**Hildebrand+Schwarz Architects** | *Working Student, AI in Architecture (prev. Intern)* — Jul. 2026 – Present
- Joined as a summer intern on large-scale projects, producing and revising drawings in the office's BIM workflow
- Wrote a Python script that renames and renumbers 400+ rooms in a building model in under a minute, a job that used to take most of a day
- Stayed on as a working student to explore where AI can take drawing production off design teams, prototyping tools for room data and plan-set updates

**pwb premiumwohnen bodensee** | *Intern, Interior Design & Architecture* — May. 2025 – Oct. 2025
- Worked with the interior design and architecture teams on high-end residential projects that a German newspaper described as among the most ambitious in southern Germany
- Detailed interiors and joinery, and updated plans, sections and material schedules after each client change

**Architekturbüro Kortner** | *Intern* — Sep. 2024
- Assisted an architect running his practice alone, from hand sketches to CAD drawings and client revisions

**City of Friedrichshafen** | *Intern, Planning & Environment Department* — Jul. 2024 – Aug. 2024
- Supported planners with zoning plans and environmental reviews of building applications

## Design & Code Projects

**Albero: Sketch-to-Rhino Design Pipeline** — *Design Studio E3, WS 2026/27*
- Redesigned a damaged historic theatre as a tree: root-shaped benches run from a new stage through the old seating rows, under a branching steel crown
- Built a pipeline in which a vision model reads photographed pencil sketches and writes Python that generates the geometry in Rhino as a parametric Grasshopper definition
- Compared about 30 crown variants in one afternoon, refining results by sketching over screenshots and sending them back to the model

**Lowara Office Building: Structural Analysis** — *Lightweight Structures Unit, SS 2026*
- Analysed Renzo Piano's Lowara Office Building (1984–85) in a team of six, tracing the load path from the curved steel roof through V-shaped tubular columns and gusset-stiffened nodes into the foundations
- Drew force polygons and funicular lines in GeoGebra to show that the catenary roof follows the flow of forces, so its members work mainly in compression and tension rather than bending

**Alpine Shell** — *Design Studio "Alpine Flux: Sensing Architectures for the Alps"*
- Designed a circular library and observation space at 1,100 m on a hiking route, with a roof that is a ski slope in winter and a walkable garden in summer

**Hôtel Suspendue** — *Design Studio*
- Reworked Paul Nelson's Maison Suspendue (1938) as a sustainable hotel, with bamboo sleeping capsules hung from a natural-fibre exoskeleton

## Art

**Fine-Line Ink Drawings** — *Ongoing*
- Draw alpine landscapes from thousands of single ink lines; works sold at local exhibitions

## Skills

**Design**: Rhino, Grasshopper, Revit, AutoCAD, Adobe Illustrator, InDesign, Photoshop, hand drawing
**Code & AI**: Python, RhinoCommon, GhPython, vision-language model APIs, Git
**Languages**: German (native), English (fluent)
